Learn and when your are ready defeat Brainly answering His question

What is Aurora?

Near the poles of Earth, observers have often seen glowing clouds shaped like curtains, tapestries, snakes, or even spectacular radiating beams

Northern Hemisphere observers call them the Northern Lights of Aurora Borealis. Southern observers call them the Southern Lights or Aurora Australis

Sprinkle iron filings on a paper and put a magnet underneath. You will see lines of magnetism that seem to 'flow' towards the poles of the magnet
